

Abstract of the Disclosure

Systems and methods for metering Internet content deployed by content providers based on a technology platform licensed from content technology providers are provided. The systems and methods of the present invention consists of a metering infrastructure that enables content providers to meter the usage of content deployed with their technologies. The technologies are licensed to content providers, and the licensing fees are based on the content usage by content users. Content providers are charged a licensing fee for the usage of commercial content. In a preferred embodiment, non-commercial content may be deployed based on the licensed technologies and may be distributed free of charge.
